

1. How does TapScan actually work?

TapScan operates through three connected systems: TapScan Accountability, TapScan Experience, and TapScan Ecosystem (Enterprise), giving organizations a more complete, real-time view of execution, engagement, and ROI.

TapScan connects physical and digital moments using simple scannable entry points like QR codes and NFC tags. When someone interacts with a TapScan-enabled asset, the platform tracks performance in real time and delivers the right experience or content based on language, location, retail environment, and program goals.

Programs are configured with a TapScan representative to ensure the experience, reporting, and validation logic align with your objectives.

Examples of what TapScan can verify or measure:

- Asset execution, placement, and quality
- Shopper and consumer experience delivery
- CPG engagement performance (by market, store, distributor, rep, or channel)
- Customer-service or support workflows
- Product transparency, traceability, and batch-level verification

TapScan provides a live, real-time picture of compliance, performance, and ROI across markets, without requiring hardware, apps, or operational changes.

TapScan is not a static QR generator. It is a dynamic activation-intelligence system built to make shopper marketing, supply chain transparency, and consumer engagement measurable, comparable, and actionable.

2. What kinds of touchpoints can TapScan be applied to?

TapScan works wherever you need it, with capabilities optimized for retail, brand, supply chain, B2B, and customer-service workflows.

Retail & Shopper Marketing

- Displays, racks, bins, case cards
- Price promotions, shelf talkers, wobblers
- On-premise POS, menus, table tents, bar kits
- Product packaging and limited-time labels

Supply Chain & Product Traceability

- Ingredient and material sourcing visibility

- Origin and provenance verification for any product type
- Batch, lot, and production-run identifiers
- FSMA 204 and compliance-ready traceability records
- Facility, distributor, and retailer handoff validation
- Quality assurance checkpoints
- Sustainability, ethical sourcing, and transparency narratives
- Digital ledger view of product movement end-to-end

Customer & B2B Communications

- Pamphlets, sell sheets, trade show materials
- Distributor and retailer one-pagers
- Sales decks, outbound sales collateral, QR on business materials
- Broker/partner enablement programs and portals

Customer Service, Returns & Support Networks

- Product packaging or inserts linked to support journeys
- Returns, credits, and issue-reporting flows
- Warranty registration and claim journeys
- Help-center articles, FAQs, and ticket intake forms
- Escalation paths for field reps, distributor teams, or key accounts

Consumer & Brand Experiences

- TV screens, digital media, print ads
- Tasting events, sampling stations, in-venue activations
- Loyalty and membership enrollment
- Customer onboarding, care-guide delivery, and “how-to” content

Build intelligence (actionable performance data) and update interfaces and touchpoints in real time — no redeployment required — from first impression through auto-deployed follow-up support.

3. What insights can I expect when using TapScan?

TapScan surfaces real-time, actionable insights across the entire program lifecycle; connecting execution, engagement, product movement, and brand performance directly back to program goals.

Brand, Retail & Execution Visibility

- TapScan reveals what is happening at retail and across field execution in real time, including:
- Which displays and assets were actually activated by store and retail chain
- Photo-verified asset execution, quality issues, and damage impact mapping
- Leaderboards by distributor, sales rep, chain, and store
- Compliance rates over time, by program, and by asset type

Consumer & Shopper Engagement

- TapScan measures how consumers and shoppers interact with your brand and experiences:
- *Asset and campaign performance by market, store, campaign, or channel*
- *Engagement patterns by language, location, and time of day*
- *Behavioral signals tied to program goals and conversion paths*
- *Product & Supply Chain Intelligence*
- TapScan provides visibility into product flow, sourcing, and transparency:
- *Verified movement from supplier → distributor → retail*
- *Batch- and lot-level traceability aligned with FSMA 204*
- *Data supporting authenticity, origin, provenance, and sustainability narratives*

The Result: A Clear Line Between Investment and Outcomes

These insights create a measurable link between what you invest, what happens in the market, and what delivers results. Giving brands a new, higher level of visibility and ROI clarity that has previously been impossible to capture.

4. Does TapScan integrate with the systems I already use?

Yes. TapScan is designed as a lightweight, API-ready layer that integrates with:

- CRM systems (Salesforce, HubSpot)
- Distributor data feeds
- Retailer data portals
- ERP and inventory systems

- Loyalty and membership platforms
- Supply chain and traceability databases

You can also export raw data or connect TapScan to BI tools like Power BI, Tableau, or Looker for deeper analytics. Integration can be as simple or as advanced as your team prefers, TapScan adapts to your existing ecosystem.

5. How does TapScan compare to RFID Technology?

RFID tracks physical movement using specialized tags and scanning hardware. TapScan tracks activation, engagement, and compliance using universally accessible QR identifiers.

RFID strengths:

- Automates inventory counts
- Tracks pallets/cases inside warehouses

TapScan strengths:

- No hardware needed; anyone can scan with a smartphone
- Tracks execution, shopper engagement, and digital experiences
- Delivers consumer-facing content instantly
- Works in retail, on-premise, supply chain, and media environments
- Cost-effective and scalable to millions of units

Where RFID stops at logistics, TapScan extends into real-time marketing intelligence, behavior insights, and consumer experience delivery.

Many organizations use a combination of tools unify product flow with activation and engagement performance.

6. What is an NFC Tag?

An NFC tag (Near Field Communication tag) is a small chip that allows a smartphone to interact with an object simply by tapping it. Unlike QR codes, which must be scanned with a camera, NFC tags trigger an action automatically when a phone is brought close to them (no app, battery, or power source required).

NFC tags are commonly used for:

- Product information and authenticity checks

- Tap-to-open digital experiences
- Retail displays and on-premise activations
- Smart packaging and brand storytelling
- Contactless menus or support journeys
- Loyalty, membership, or sign-up flows

With TapScan, NFC tags work the same way as QR codes: they act as digital entry points that instantly connect a physical item to a live, trackable experience. TapScan captures performance data, verifies execution, and delivers the right content based on language, location, and program goals.

NFC tags make physical items “tap-enabled,” creating seamless, instant interactions that TapScan can track and measure in real time.

7. Is TapScan an agency?

No, TapScan is not a marketing agency.

TapScan is an intelligence and experience delivery platform. Agencies often partner with TapScan to add measurement, accountability, and adaptive experience delivery to their creative and field execution programs.

Agencies or brands create the assets; TapScan is the digital layer that unifies execution verification, measures performance, and delivers the engagement experience in context (by day, time, language, and location).

8. How quickly can TapScan be set up for my organization?

Most organizations can launch TapScan within 2–4 weeks, depending on:

- The number of programs or network complexity
- Whether custom UX or APIs are needed
- Context capability adds (customization by day, time, location, language)
- How many people and or partners, distributors/vendors need onboarding

Pilot programs can be activated in days. Enterprise rollouts can be phased regionally, nationally, or globally. TapScan is built to scale quickly with low operational lift.

9. Who is TapScan a good fit for?

TapScan supports all brands and organizations that need live data visibility, compliance, experience delivery performance, including but not limited too:

- CPG
- Beverage Alcohol
- Retail
- Foodservice
- Supply Chain (Food Safety & Traceability)
- Media, Sports & Entertainment
- Agency's
- Universities
- Banks

- Insurance

TapScan is ideal for teams that need to standardize communication (global-to-local) or brand-experience delivery, providing clarity, accountability, and measurable ROI across physical and digital touchpoints.
